

MILESTONE 07 / DELIVERY RECORD

Verification and reports

Reports validated; execution pending

Before/after evidence, principal change, per-file explanations, Markdown/HTML downloads and saved history.

What was built

Before/after evidence, principal change, per-file explanations, Markdown/HTML downloads and saved history.

Debugging and evidence

16 report tests; actual live-scan downloads; reopened saved run in browser shows full report.

Remaining limitations

Test outcomes from external repositories remain NOT_RUN until sandbox prerequisites are met. Reports are not a complete secret scanner.

Scope of this document

The following pages list the 4 source, configuration, test and documentation files assigned to this stage, with their purpose. Shared files are assigned to their principal delivery stage; the complete guide lists every authored file. Generated dependencies, caches, private settings and saved repository data are excluded.

Owner workflow

All development stages were authorized together. In-product approval is still required before repairs and again before publishing. No remote GitHub changes were made during development verification.

Folder structure

```
backend/  
  src/  
    main/  
      java/  
        dev/  
          codebasedoctor/  
            report/  
              ReportGenerator.java  
    test/  
      java/  
        dev/  
          codebasedoctor/  
            report/  
              ReportGeneratorTest.java  
  docs/  
    DOCUMENTATION_FEATURE.md  
    report-format.md
```

Files and responsibilities

`backend/src/main/java/dev/codebasedoctor/report/ReportGenerator.java`

Created | Delivery stage 7

Generates escaped Markdown and self-contained printable HTML from actual stored analysis, changes and verification evidence.

`backend/src/test/java/dev/codebasedoctor/report/ReportGeneratorTest.java`

Created | Delivery stage 7

Sixteen regression tests for factual reports, unknown counts, malicious markup, secret redaction and quoted diff paths.

`docs/DOCUMENTATION_FEATURE.md`

Updated from foundation | Delivery stage 7

Defines the implemented end-user report covering repository overview, principal/per-file changes and verification evidence.

`docs/report-format.md`

Created | Delivery stage 7

Explains the report renderer contract, evidence hierarchy, escaping and exact diff-derived counts.
